Nike Sales Dashboard

1. Problem Statement

Retail companies like Nike generate large volumes of sales data across multiple regions, cities, and sales channels. However, without a centralized and interactive system, it becomes difficult to analyze performance, track profit trends, and make data-driven decisions.

The challenge is to efficiently monitor key metrics such as total profit, units sold, regional performance, and sales methods while identifying high-performing locations and optimizing business strategies.

2. Solution / Features

The Nike Sales Dashboard provides an interactive and real-time visualization platform to analyse sales performance effectively. Key features include:

- **KPI Overview:** Displays total profit (332M), total units sold (2M), and number of retailers.
- **Regional Analysis:** Donut chart showing operating profit distribution across regions (West, Northeast, South, Southeast, Midwest).
- **Sales Trend Analysis:** Time-series graph tracking sales by units sold across 2020–2021.
- **Sales Method Insights:** Breakdown of sales via Online (51%), Outlet (31%), and In-store (18%).
- **Geographical Visualization:** Map showing sales and profit distribution across states.
- **City-Level Profit Analysis:** Bar chart highlighting top-performing cities like Charleston, New York, and Miami.
- **Interactive Filters:** Region and sales method filters for dynamic data exploration.

3. Screenshots

4. Tech Stack

- **Visualization Tool:** Microsoft Power BI
- **Data Processing:** Power Query Editor
- **Data Modelling:** DAX (Data Analysis Expressions)
- **Data Source:** Excel/CSV dataset
- **Design:** Dark-themed UI dashboard with interactive visuals

5. Unique Points

- Interactive dashboard enabling **real-time filtering and insights**
- Consolidates multiple KPIs into a **single unified view**
- Provides **multi-level analysis** (Region → State → City)
- Helps identify top-performing regions contributing up to **25% of total profit**
- Improves decision-making efficiency by reducing manual analysis effort

6. Future Improvements

- Integration with **live sales APIs** for real-time updates
- Addition of **predictive analytics (sales forecasting using ML)**
- Mobile-friendly dashboard optimization
- Advanced drill-through reports for deeper insights
- Integration with inventory and supply chain systems
